Visual Studio CodeMaid is a plug-in for the Visual Studio developer. With CodeMaid, you can do C# Code cleanup. It is a great tool to help you write cleaner code. You can choose to clean your code as you type, using smart codestyle suggestions. Or you can analyze your code or individual classes, to find possible performance bottlenecks. Also, with CodeMaid, you can generate extension methods, documentation, internal classes and more. CodeMaid can be used with the Visual Studio IDE (2005 or 2008), but it also works with the C# compiler. It works with any.NET language. It can do local cleanup and global cleanup using TeamCity and TFS. The parser of CodeMaid is very powerful, so it is very suitable for other refactoring tasks. CodeMaid is a freeware add-in for Visual Studio 2005 and 2008. To get started, download the installer. If you are using Visual Studio 2005, you can use the trial version. As the community has now released the source code for CodeMaid, this plugin can now be developed further, to be even more powerful and useful. If you would like to do more work with CodeMaid, or if you would like to discuss the project further, please send me a message. E-Mail: support@codemaid.netFor non-Latin lovers of black slang the "L" is the vital consonant, joining the "T" and "N" to form a pre-eminent trio of black Slanguage, light years ahead of the white contemporaries. That list includes Lowlife, 'Spaceman', "Splack Man", and "Goon." Not all of the "L"s in black Slanguage are "lowlives", of course. It means the "L" is used with intention, in the sense of "a lot", or "many". If you say, "A lot of people need to get L," you mean that "L" is a lot of people's name. If you're already saying, "A lot of people need to get L" you're pretty much saying, "A lot of people are L-ing." The "L" is a place marker, and "L" is what it says that you're pointing to. It's nothing to scoff at. That "L" is a third of the way to the Black Slanguage Hippopotamus. Many people reading this might wonder where "black" comes from in "Black Slanguage." In the examples above I referenced "low" because it is most immediately associated with the culture of the street and hip hop, and "slang" because it is of course the quintessential black form of English. CodeMaid is a VS add-in that allows you to perform code cleanup, refactor, find usages, indent, assist with code completion, navigate to definition etc. Hello, Every time I install my Visual Studio 2005, I have to search my computer for some address, such as.mylogdb or.svn folders. Since I have a lot of active projects, I wonder if there is a way to define some "standard" locations to search for. Right now, I manually find the location of.mylogdb folder in my computer, and define it in the Options/Environment/Settings/General. The other folders could be added in the same way. I know I could use the Add-in manager, but I'm looking for a way to define my own "standard" locations for the CodeMaid, to avoid any compatibility issues with future VS add-ins. Hi, I am using Visual Studio 2005 (VS8) on Windows Server 2003. Whenever I open VS8 a dialog box comes up and says that "Your on-line Help service is limited". I use this service for all VS versions but in this case it gives me some problems for VS8. It seems to be due to "VSWrap.dll". I have installed "VSWrap" from Add-in Manager as instructed in this KB article: Does anyone have an idea what can be the solution to this problem? When I open Visual Studio 2005 it asks me about a Windows Update, then it tells me that "You have not made sufficient efforts to install security updates for this computer". I was able to open Visual Studio 2008 and it didn't ask me about a Windows Update, but I don't want to download the service pack manually. I already had a file search when I open VS2008. But I want to know how can I prevent this Windows Update on VS2005. Hello, I would like to know which version of Visual Studio is compatible with the newest version of.NET framework. Thanks, Hi, Is there a way to find out which interface types are used in a particular Visual Studio project? I've created a code analysis problem on CodeMaid but I'm not sure what interface types that CodeMaid is looking for when trying to analyze the project. A simple way to find the interface types would be very much appreciated

What's New in the CodeMaid?

CodeMaid enables you to cleanup your source code in a very convenient way by applying the best C# and Visual Studio development practices to your code. In fact, CodeMaid enables you to implement powerful editing functions that make C# development even faster. These features include: Advanced code analysis: CodeMaid analyzes your code with a comprehensive set of C# and Visual Studio development utilities, providing code analysis, warning and refactoring capabilities such as formatting, code comments, code check, change data capture, line numbering, syntax coloring,... Code indent and alignment: To make your source code more readable and organized, CodeMaid enables you to format your code in a very convenient way. C# syntax coloring, code numbering, indentation and alignment are among the features that you can specify to suit your requirements. Code folding: CodeMaid enables you to turn on and off the code folding support in the IDE. This feature makes your source code much easier to read by folding or unfolding the selected block of code. Code Completion: CodeMaid enables you to gain access to new source code elements that may be available or suggested for you, no matter whether they are members of an existing class or nested/static members of other classes that are opened in the code editor. Error Preview: You can preview errors or warnings in multiple situations while you are typing code. CodeMaid also enables you to correct problems in your code with a single click. Supports C# 5.0 and Visual Studio 2008 in the free version. A prototype of CodeMaid was released back in 2004. Since then, hundreds of thousands of hours were invested to improve its performance, stability, size, and quality. Version 1.x was released at the end of 2006. Since then, CodeMaid 1.x is tested by hundreds of developers across the world. The latest version of CodeMaid, version 2.0, has been released today. There are many significant improvements in this version. This version includes: No more support for Visual Studio 2005. A new and better main window. C# 5.0 and Visual Studio 2008 support. A much smaller size. An even faster code analysis. An even more powerful code formatting. A smart and convenient code folding option. A faster code completion. A smarter code completion. Updates to existing features.
